## **BEST AVAILABLE IMAGES**

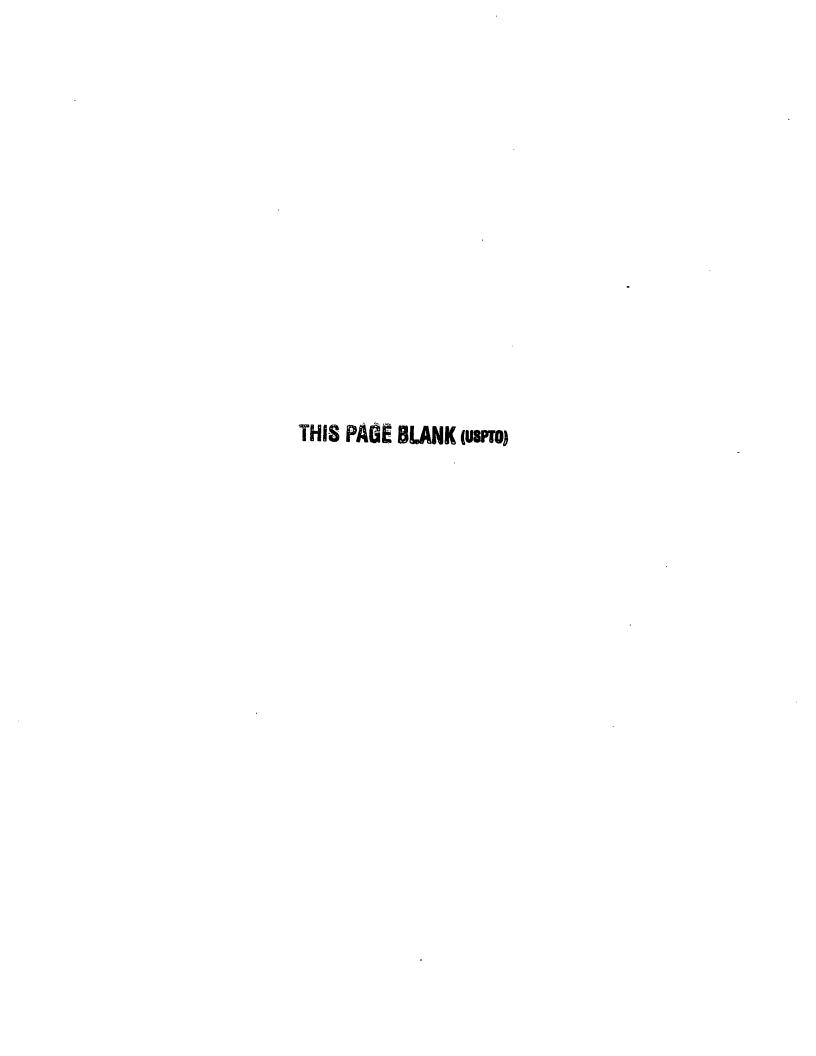

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

## IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

On Mar 11, 1998 this sequence version replaced gi:3335062.

BAC clone CIT987SK-363B6 is located in band 16pl3.1 of chromosome
16. Genes were identified by a combination of five methods:

KGRAIL (available by anonymous ftp from arthur.epm.ornl.gov),

Genefinder (available by anonymous ftp from colineu.washington.edu), GENSCAN (available using the e-mail server
at genscan@gnomic.stanford.edu), searches of the EST database at
TIGR (http://www.tlgr.org/tdb/hcd/hcd.html) and searches against a
peptide database. Repeats were identified using RepeatMasker (Smit,
A.F.A. and Green, P. unpublished,
http://ftp.genome.washington.edu/rm/RepeatMasker.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Vencer.

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           McCarthy,M., McEwan,P.,
